Hook-on Sideshifters

Models HN

The Bolzoni hook-on sideshift HN model is a useful addition to the fork lift truck. It is now recognized as the first upgrade to satisfy the market demand for improved reliability and efficiency in handling.

Don't waste your time in endless fork lift truck manoeuvres.

Features:

- High visibility.
- One piece upper profile for added strength.
- The cylinder is a double rod design which ensures equal speed in both directions. The cylinder may be dismantled allowing for easy replacement of worn parts.
- Easy and safe installation procedure.
- Upper handling hook allows the sideshift to be fitted and serviced.
- Adjustable lower hooks are bolted to the hook support using high strength bolts on a 3 degree sloping plane. This prevents the hook from moving downwards and then allowing excessive clearance on the fork lift carriage.
- Upper and lower pads are completely protected: the upper ones inside the profile, the lower ones inside the hooks.
- Grease fittings on the upper and lower pads ensure a smooth sideshift operating with long life.
- Load backrest is available in 48" high Class II & III, on request.
- OSHA or state regulations may require the installation of backrests. Bolzoni suggests that you ckeck your use of sideshifters against these requirements.

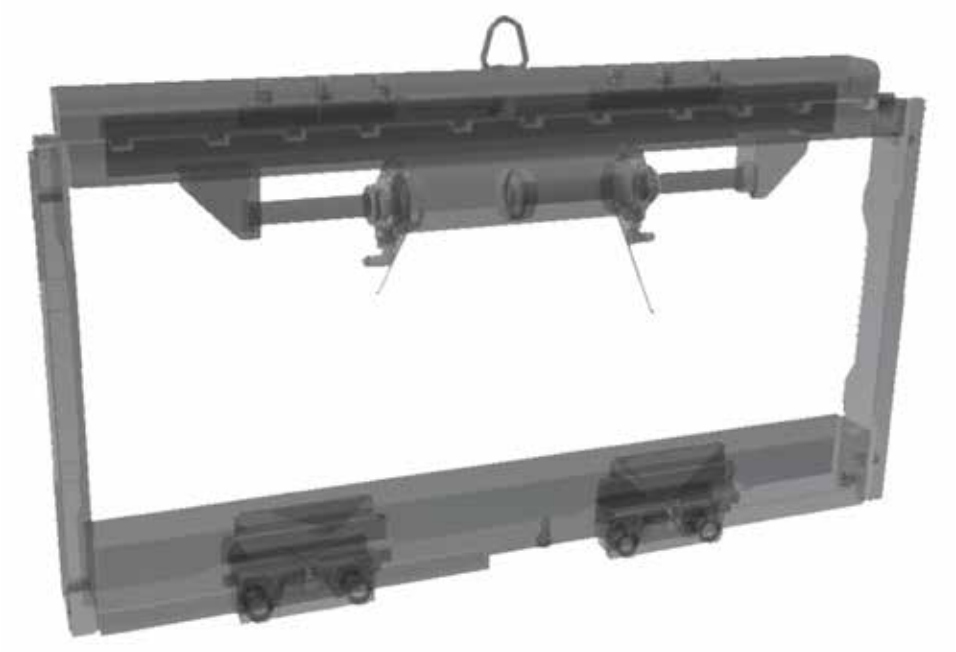

BOLZONI
